Instructions for Care Motorcycle Clothing Leather-Textile-Mix

**The product-life of every piece of clothing also depends on the correct maintenance.
So please always note the tags sewn into the clothing**

The function of the GORE-TEX membrane will remain intact even after washing several times.
Before washing the motorcycle clothing, first remove the fall-pads and the protectors always!

Washing:

Please make sure that you pay attention to the care-label sewn into the clothing!

If not stated otherwise, select Hand Wash (with pH neutral soap and lukewarm water). NO machine wash.

Remove heavy soiling on the leather sections in advance with a damp cloth or soft brush.

In order to avoid detergent residue on the GORE-TEX® material, please rinse sufficiently (Repeat the rinsing process).

Do not use any fabric softeners!!!

Ironing:

Do not iron motorcycle clothing made of leather.

Laundry Dreyer

Not into the laundry drier. Dry at room temperature. Do not dry in the sun!

Bleaching:

Do not use any chlorine bleach.

Dry-cleaning:

No dry-cleaning.

Waterproofing:

Impregnation does not impair the function of the GORE-TEX membrane in any way. Quite the contrary, well-impregnated clothing repels dirt and water. A wet shell fabric causes heat loss. A good impregnation therefore protects from the cold as well.

The shell fabric of the clothing with GORE-TEX materials are already protected with waterproofing during the manufacture. However since this waterproofing is not sustained permanently, the clothing should be handled after washing with a commercial waterproofing spray if

the water does not run off any more from the shell fabric. Use silicone-free impregnation; spray it on after washing and allow it to dry.

After about 2-3 washes, the clothing should be water-proof again.

Leather can be handled with lotion or foam meant for leather care.

Tip: in case of perforated leather, it is recommended not to use any leather grease, since this is rubbed into the perforation, and the leather does not absorb it. This results in unattractive residues in the perforation.

Repairs:

In spite of all the caution, the clothing can become damaged. Even small tears and holes cause water to get inside, in the case of water-proof clothing. Due to the special construction of the GORE-TEX clothing, such damages should be repaired only by a specialized person. In this case, please contact your specialist dealer or our sales team.

Attention!

Only washed clothes will be repaired!

The leather used in combination with GORE-TEX is highly breathable and therefore not treated with an additional protective coat of color. This can affect the color stability of the leather.
